

# ABSTRACT OF SANITARY REPORTS.

VOL. IX. WASHINGTON, D. C., SEPTEMBER 21, 1894. No. 38.

TREASURY DEPARTMENT, U. S. Marine-Hospital Service.—Published in accordance with act of Congress approved February 15, 1893.

## UNITED STATES.

[Reports to the Supervising Surgeon-General M. H. S.]

*No further cases of yellow fever in Baltimore.*

BALTIMORE, MD., September 13, 1894.

SIR: I have to report that, thanks to the efforts of the commissioner of health, Dr. McShane, I have been able to inspect the men who were engaged in loading the *Tyzack*. Yesterday was the fifth day after the last exposure, and the men were all well. The same report can be made to-day, and I feel confident that the danger is past. I understand that the case at quarantine continues to improve.

Yours, respectfully,

JOHN GUITÉRAS,  
Sanitary Inspector, M. H. S.

*Report of immigration at New York for the week ended September 15, 1894.*

*Status of epidemic diseases in Europe and Asia.*

LONDON, September 4, 1894.

SIR: I have the honor to submit the following report relative to the spread of cholera and other epidemic diseases in Europe, the official information being for the seven days ended August 29, with information from other sources to include September 3.

Since last week cholera has increased in Germany and Austria-Hungary, especially in the latter country, where in Galicia the epidemic has assumed most alarming proportions. A slight increase is noted in Belgium in the towns along the Meuse, while in Holland the disease appears to be at a standstill.

*Germany.*—From the 20th to the 27th of August at mid-day the following cases and deaths were reported :

East Prussia : 16 cases and 8 deaths occurred in the city of Königsberg ; 1 case and 1 death in the barracks at Grabenhof, district of Labiau ; 4 cases and 2 deaths in the city of Osterode, with 1 case in each of the suburbs, Mohrunge and Fischhausen ; in the city of Johannisburg, 2 cases and 2 deaths, and in the same district, at Wilken, 1 case and 1 death ; in Niedzwedgen, 3 cases and 1 death.

District of the Vistula : In all, 34 cases and 12 deaths. In the workhouse at Neufahrwasser, 1 case ; Dantzig, 5 cases ; Weichselmünde, 3 cases and 1 death ; Käsemark, 1 case and 1 death ; Troyl, 4 cases, and Little Plehnendorf, 6 cases and 3 deaths ; in Schöneberg, on the Vistula, 1 case and 1 death ; in Thorn, 4 cases and 2 deaths, and in 2 villages near Thorn together, 2 cases and 1 death ; In Rosenthal, district of Löbau, 1 case and 1 death, and in Gollub, district of Briesen, 6 cases and 2 deaths.

District of Wetze-Warthe : Total, 24 cases and 9 deaths. In 3 small villages in the district of Bromberg, altogether, 14 cases and 3 deaths ; on the Bromberg canal, 1 case and 1 death ; in 2 villages of the district of Wirsitz, 4 cases and 2 deaths, and in the district of Schubin, 5 cases and 1 death ; at 4 places outside of Kolmar, 6 cases, and at 1 place in the district of Filehue, 2 cases ; in Landsberg, on the Warthe, including its suburbs, 1 case and 1 death.

District of Potsdam : A fatal case of cholera occurred in a man, a river boatman, who came to Freinwalde on the Oder from the district of Netze-Warthe, overland ; in Oberschleisen, district of Kattowitz, in 2 communities, 1 case and 1 death.

District of the Rhine : On a boat which arrived at Ruhrorten Harbor from Rotterdam there were 2 cases and 1 death.

The following is from Berlin, bearing date August 29 :

In order to prevent the cholera being spread by the boats plying on the rivers, the cholera commissioner for the basin of the Oder has given orders that the barge and raft traffic on the Metze and the Warthe shall be placed under medical supervision at certain specified spots.

By order of the Emperor, large gatherings of civilians on the occasion of the grand maneuvers are, in view of the cholera cases that have occurred in some parts of Prussia proper, to be as far as possible avoided. It is further reported that owing to the danger of cholera in and near Dantzig, the concentration of the German fleet will take place, not at Neufahrwasser, but at Swinemünde. Under date of August 30, the Prussian minister of public works has given notice that no special excursion trains will be run to the districts in which the maneuvers are taking place. In the interests of the population of eastern Germany these decisions must be greeted with satisfaction. From accounts which have reached Berlin it appears that the population of the eastern provinces is under the delusion that the cholera is not of so dangerous a nature as in former years, and that such stringent precautions are not necessary. The measures adopted by the authorities here, it is true, done their work well, but in those localities in Germany in which the disease has appeared it has taken as virulent a form as two years ago. There is no need for anxiety, but prudence is very requisite.

Under date of August 30, the U. S. vice-consul-general at Berlin, Mr. Zimmerman, informed me that the consul at Breslau had re-reported "that cholera cases have become more numerous in Upper Silesia in the last day or two. At the border village of Bendzin, especially, many cases are reported."

On August 31, Mr. Zimmerman wired as follows :

One case cholera officially announced at Stettin, two other cases under examination.

The following dispatch is dated Berlin, September 2 :

A focus of the cholera appears to have been developed at a village called Burgeln, in Hesse. Eight cases and 2 deaths have already occurred there. The patients are poor people, and no cases have happened among the soldiers in the neighborhood, who were, in fact, instantly removed to other quarters when the outbreak became known. A commission has been sent to the place to ascertain the causes of the outbreak.

September 3 : Altogether, 12 cases and 3 deaths have so far occurred at the village of Burgeln, near Marburg, and 50 workmen who are generally employed in the neighborhood have been forbidden to leave the place. Prof. Fränkel of Marburg, one of the most distinguished bacteriologists of Germany, is conducting the work of taking preventive measures.

*Austria-Hungary.*—From August 13 to 19 there were reported in Galicia 944 cases of cholera, with 531 deaths, and in Bukowina 144 cases, with 65 deaths. The minister of the interior has declared the following places as infected centers: Horodenka, districts of Buczacz, Czortkow, Husiatyn, Tlumacz, and Kotsman. The official figures of cases, and deaths, together with the various localities, are given in the following table :

Vienna, August 27 : It is semiofficially admitted that cholera continues to make great progress in Galicia and Bukowina, 36 out of the

83 districts in those provinces being now infected. During the present month there have been 2,400 fatal cases in Galicia and Bukowina. Cholera has also assumed the character of a serious epidemic in the district of Bielitz, in Silesia, into which it was introduced by soldiers from Galicia on their way to the army maneuvers in Bohemia. During the last four days there have occurred in Galicia 644 fresh cases of cholera, with 332 deaths, and in Bukowina during the same time 75 fresh attacks and 65 deaths.

Vienna, August 28: According to the latest official returns, 349 cases of cholera and 171 deaths occurred in Galicia on Sunday and Monday. In the Bukowina 43 cases and 42 deaths were registered by the authorities. It has now been proved that the disease has been introduced into the province of Austrian Silesia. Vienna, August 29: According to the latest official reports, 70 cases of cholera and 49 deaths took place in Galicia on Tuesday and 12 cases and 5 deaths were registered in the Bukowina. Vienna, August 30: During the last twenty-four hours 272 cholera cases and 149 deaths have been reported from Galicia. During the same period there were 26 cases and 13 deaths from Bukowina. Vienna, August 31: To-day's report on the progress of the cholera states that during the last twenty-four hours there have been 251 fresh cases and 107 deaths in Galicia and 15 attacks and 12 deaths in Bukowina. The total number of deaths since the beginning of the epidemic to the 26th of August this year in these two Austrian provinces alone amounts to 1,935 in Galicia and 245 in Bukowina. According to the reports of the senior sanitary board, rather more than half the cases registered have ended fatally.

Vienna, September 1: During the last twenty-four hours there have been 200 fresh cases of cholera and 95 deaths in Galicia and 14 attacks and 10 deaths in Bukowina. No further cases have been registered in the province of Austrian Silesia.

Vienna, September 3: The report on the progress of the cholera for the last three days states that in Galicia there have been 623 fresh cases and 313 deaths; in Bukowina, 46 cases and 25 deaths, and in Silesia, 1 attack.

The epidemic has spread to some new districts in Galicia, and nearly half that province is now infected. According to a private report, cases of cholera have occurred at Lemberg, the Galician capital, where a great exhibition is just now attracting numerous visitors from a distance. According, however, to the official report, no case of cholera has yet occurred in Lemberg.

*Netherlands.*—Between August 14 and 21, cases of cholera were reported as follows: At Maestricht, 5 cases and 3 deaths. At Rotterdam, 3 cases and 1 death; of these, however, 2 cases occurred on the Rhine boat *Siegfried*. In Haarlem and its suburbs, altogether, 11 cases, some among the boatmen, others among citizens. In Amsterdam there were from 38 to 40 cases, and up to August 18 there were 13 deaths. At Velsen, to date, 7 cases; Womerveer, Purmerend, and Amstelveen, each 1 case. In Kolhorn, several cases, and in Nieuwer Amstel, near Amsterdam, 2 cases.

Amsterdam, August 27: Three cases of cholera and 1 death have occurred here during the past twenty-four hours. One death is reported from Maestricht and another from Nieuwerkerk.

Flushing, August 27: Four men belonging to the crew of the German vessel *Adelheid*, which has put in here on her way from Antwerp to Dantzig, have been attacked by cholera, and 1 has died. A dispatch from the U.S. consul at Antwerp at this date to Col. James

Neal, consul at Liverpool, states that there was no cholera at Antwerp. Amsterdam, August 28: According to to-day's cholera bulletin, 1 case of the disease is reported in this city, another at Wyk-an-Zee, and 1 death at Oirschot.

Under date of August 29, Mr. Edward Downes, the U. S. consul at Amsterdam, furnishes the following information:

The total number of cases of Asiatic cholera in this city from August 3 to date is 47, the total number of deaths 17. On the 23d instant the medical inspector of the province of North Holland reported cases as follows, all occurring between August 14 and 23: Womerveer, 2; Purmerend, 2; Nieu-Amstel, 2; Bassingerhorn, 1; Haarlem, 6; Krommenie, 1; and Helder 1.

On the same date Mr. L. S. Roque, the consul at Rotterdam, writes me:

During the week ending August 25 there has been reported at Rotterdam 1 case of cholera and 1 death. This means 4 cases since July 27, resulting in 3 deaths and 1 recovery. Since Monday, August 20, no new cases occurred here, consequently this city is at present free from cholera. From Maastricht have been reported up to date 67 cases of cholera, with 34 deaths. From Hellvoetsluis, 1 fatal case, and from Nieuwerkerk also 1 fatal case.

Amsterdam, August 30: According to this afternoon's official report, 1 death from cholera has occurred in this city during the last twenty-four hours; 2 cases each at Maastricht and Spykenisse, and 1 at Rotterdam.

Amsterdam, September 1: The official cholera bulletin issued to day gives the following list of fresh cases and deaths that have occurred in Holland during the past twenty-four hours: Amsterdam, 2 cases; Maastricht, 1 case and 2 deaths; Flushing, 1 death (that of a sailor belonging to the English vessel *Volunteer*); Landomeer, 3 cases, of which 2 proved fatal; Heer, 2 cases; Heugem, 1 death, and Elsobeek, 1 case. September 1: To-day's official cholera bulletin reports 1 death also at Nieuwpoort, on the Lek, 1 case at Spykenisse, and 1 death at Boksemeer. September 3: The following cases and deaths from cholera have been reported in Holland during the last twenty-four hours: Amsterdam, 1 case, 1 death; Maastricht, 3 cases, 1 death; Dordrecht, 3 cases, 2 deaths. A sailor ill with cholera has been landed at Rammskens road, off Flushing.

*Belgium.*—In the province of Liege, from August 5 to 11, there were reported 36 deaths from cholera. Under date of August 30 the *Courier de Bruxelles* states that the choleraic epidemic at Liege has almost entirely disappeared, only 1 case having been registered yesterday. On the other hand, 20 cases, of which 6 proved fatal, occurred yesterday at Tilleur, Jemeppe, and St. Nicolas. A boatman has also died of the disease at Neupelt.

Liege, August 31: It is announced that a most severe epidemic of choleraic disease has broken out in the village of Tilleur, in this province. Between Wednesday night and yesterday morning there were 25 cases, of which all but 1 have already proved fatal. Ten deaths from cholera and 12 fresh cases of the disease are reported from Seraing to-day, August 31.

*Sweden.*—On board the steamer *Nordkusten*, in the quarantine off Stockholm, there were 2 cases in which the cholera bacillus was found. The ship was duly isolated. On board the steamer *Wasa* at the Fejan Quarantine, there were, up to August 17, 13 cases of cholera taken to hospital. On August 19 there was 1 death. On the steamer *Finland*, which arrived from St. Petersburg on August 14 at Stockholm, there was a man taken ill who had been sick with cholera three weeks before at St. Petersburg, from where he was discharged on August 9.

On arrival he was found to be still infected with the cholera bacillus, and was sent to the isolation hospital on the island of Skotland.

*Russia.*—The medical department has reported the following cases and deaths from cholera between July 28 and August 11, not including western Russia. For convenience of reference the figures have been arranged in tabular form, showing the governments and cities affected, dates, cases, and deaths:

Government or city.	Dates.	Cases.	Deaths.
Lomza.....	July 22-Aug. 4...	53	14
Plock.....	July 15-July 28...	276	153
Warsaw (city).....	July 22-Aug. 4...	298	158

Mohilew.....	July 15-Aug. 4...	4	2
Tula.....	July 22-Aug. 4...	4	1

The latest official reports are as follows: Government of Lomza, August 11 to 18, 144 cases and 68 deaths. Plock, August 9 to 16, 579 cases and 288 deaths. City of Warsaw, August 16 to 23, 210 cases and 85 deaths. Government of Warsaw, August 13 to 20, 1,104 cases and 589 deaths. Government of Kalisch, August 14 to 16, 17 cases and 6 deaths. Kielce, August 11 to 16, 1,055 cases and 530 deaths. Radom, August 10 to 12, 608 cases and 265 deaths. Lublin, August 12 to 18, 56 cases and 33 deaths. Siedlez, August 11 to 20, 609 cases and 290 deaths. Petrikau, August 13 to 19, 938 cases and 461 deaths. In the government of Lodz, on August 13, there were 231 cases and 143 deaths. Lodz is a district in Russia, only about 23 miles from the German frontier at Thorn. In Grodno, including the cities of Brest and Kobrin, from July 21 to August 4, there were 166 cases and 70 deaths. District of Schaulen, government of Kovno, August 5 to 11, 19 cases and 11 deaths. City of St. Petersburg, August 14 to 21, 160 cases and 79 deaths, and from August 21 and 22, 26 cases and 12 deaths. Narva, August 10 to 16, 9 cases and 6 deaths. District and city of Bauske, government of Courland, July 15 to August 10, 74 cases and 36 deaths. District of Jurjeu (Livland), up to August 13, 45 cases and 23 deaths. City of Riga, August 14 to 21, 35 cases and 16 deaths.

*England.*—September 4: A telegram has been dispatched from the medical department of the local government board to the Fowey port sanitary authority, informing them that the schooner *Volunteer*, of Fowey, from Antwerp to Belfast, has landed a cholera patient at Rammskens road, off Flushing. On August 28 the local government board issued the following official statement:

England remains free from cholera or suspected cholera.—R. THORNE THORNE.

*Turkey.*—In Adrianople a fresh outbreak of cholera occurred in the beginning of July after it had been thought to have ceased, appearing among the garrison of 12,000 men, and from thence was carried to the civic population. This fresh importation was thought to have been brought from Austria-Hungary. In the barracks, up to July 25 there were 40 cases and 17 deaths. In different districts of the city, from July 12 to 22, there were 9 cases and 7 deaths. From July 23 to August 9, 230 cases and 130 deaths, officially reported. Of these, 164 cases and 65 deaths occurred among the soldiers. In the village of Mustapha Pacha cholera was brought by a soldier to the quarantine hospital, and from July 31 to August 1 there were 3 cases and 1 death. From August 2 to 5, at the same place, 5 cases and 3 deaths. A sanitary conference was to have taken place at Mustapha Pacha, but on account of the cholera the meeting was forbidden by the chief medical officer of the district, who directed the meeting to be held at Tschataldja. In Asia Minor many cases are reported. The vilayets of Hudavendkiar, district of Brussa, from July 22 to August 10, 27 deaths. In Kastamuni, from July 8 to August 5, 97 cases and 51 deaths. In Trebizond, from June 27 to 29, 5 cases and 3 deaths. In Sivas, from June 22 to August 6, 262 cases and 161 deaths. In Angora, from June 13 to August 9, 768 cases and 490 deaths. In Kouia, from June 28 to August 7, 363 cases and 250 deaths. In Marmurat el Aziz, from July 7 to August 7, 178 cases and 94 deaths.

*Smallpox.*—On August 28 there were reported 8 cases of smallpox in London. The epidemic in the district of Portland Town is said to be virtually over, but it has been succeeded by an epidemic near Lisson Grove. On September 2 there were only 2 fresh cases reported. The latest returns show a total of 152 persons under treatment. The mortality is very low.

*Plague in Hongkong.*—On August 30 the total mortality was reported to be 2,560.

Hongkong, August 31: A meeting of the council will be held next Monday, when Hongkong will probably be declared free from plague, the number of cases having been reduced to a minimum.

Respectfully, yours,

FAIRFAX IRWIN,  
Surgeon, M. H. S.

BELGIUM. •

*Cholera increasing in Liege.*

LIEGE, September 7, 1894.

The inclosed report, though dated the 1st, was only received to-day.\* That, however, is a matter of no importance, as the figures convey no idea of the real situation. \* \* \* I am assured by a hospital surgeon that in the last ten days there have been more than 200 cases of cholera in this city. \* \* \*

There is now a visible agitation in the community—those who have remained in town are anxious to get away and those who have spent the summer in the country are afraid to return. \* \* \*

NICHOLAS SMITH,  
U. S. Consul.

To the SUPERVISING SURGEON-GENERAL M. H. S.

\*This report states that during the week ended September 1, 1894, there were 23 deaths from cholera in Liege.

## CHINA.

*Plague diminishing at Hongkong.*

Under date of August 11, 1894, the U. S. vice and deputy consul at Hongkong reports that during the two weeks ended August 4, 1894, there were 47 deaths from plague in that city.

*Report on smallpox and cholera in the consular district of Ningpo.*

NINGPO, June 22, 1894.

The following information was furnished by all the medical officers in this consular district. The nonmedical authorities are residents of from fifteen to thirty-five years' standing, and their statements are as accurate as it is possible to obtain in a country where statistics are not kept. When we read in the home papers of the great care taken to prevent the introduction of contagious disease through the Atlantic ports, it does seem strange that here no attention, so far as I am aware, is paid to this subject at all. While this district supplies the United States with millions of pounds of tea and thousands of pounds of silks, matings, and large quantities of other goods, no attention can be paid to their sanitary condition, as all exports are invoiced at Shanghai.

You will observe that all the medical men declare that there is danger in carrying the germs of the disease in the silks and teas, and Doctor Main states that he has—

seen patients dying of smallpox in close proximity to the silk weavers at the looms and that they would never dream of stopping work. \* \* \*

It is worthy of note that in those towns where vaccination is practiced the ravages of smallpox have been little or none, and I am glad to say this method is gaining ground and in several places has entirely superseded the dangerous practice of inoculation through the nose. \* \* \*

Mr. Hendry, of Nan Tiong, writes:

There is undoubtedly great danger of the spread of smallpox and cholera by means of the exportation of tea, silk, matings, and especially old rags, in the countries to which these things are sent.

Dr. Barchet, of Kinwha, says:

Articles of commerce, such as silks, matting, etc., can certainly carry the germs of smallpox or cholera if exposed to them. It certainly is not safe to allow merchandise such as silk, tea, etc., to be freely exported to a foreign country where it is known that they were prepared in infected localities.

Dr. Main, of Hangchow, who has under his charge what is probably the finest and largest hospital in China, a gentleman of thirteen years' experience in that city, states:

Merchandise for export prepared in infected localities ought to be disinfected before it is sent out of the country. I think it would be almost impossible for silk not to carry the germs of smallpox.

Dr. Venable writes:

My teacher had his little boy inoculated, and came here regularly every day while the child had the disease. He mentioned it casually one day when the child was nearly well. This gives an idea of their carelessness about the disease.

He also says:

It would be safer to quarantine as regards exports from infected localities.

**Rev. Mr. Stuart, of Hangchow, says :**

It seems to me that the danger of having the germs of the disease carried in silks, teas, etc., is very slight. Those suffering from the disease would not be likely to do work, and so would not come in contact with the merchandise. But we know that the children and the others having the disease are likely to be in the rooms where the work is going on, and they may handle the goods. No precautions whatever would be taken to prevent the germs from coming in contact with the goods as they are manufactured. It seems to me that there would not be much risk in allowing goods to go from the infected regions, for the reasons just given.

**Mr. Mason does not consider it especially dangerous to export merchandise exposed to smallpox—**

Because the virus with which native doctors inoculate children in the nose spoils, and will not communicate the disease if it is exposed to light and air for a few weeks.

**Dr. Hickins says :**

It is unsafe to export such merchandise, but I think the risk must be small, as it would not appear that smallpox outbreaks first appear in large silk warehouses, etc., where the bales of merchandise are first opened out, in any higher proportion than elsewhere, but the sanitary officers of the ports and large towns and cities ought to be able to give some pretty definite ideas on such subjects. Doubtless old rags and old wearing apparel are highly dangerous, but I never hesitate myself to buy new silk and get it made without taking any precautions.

**Dr. Molyneux, the customs medical officer at this port, writes :**

As I have before indicated, most of the sufferers are children too young to handle merchandise. I have not seen adults working while suffering from the malady. As a matter of fact, the disease with them is too severe (it being the form which attacks the unvaccinated) to permit of active bodily effort, but I am very sure that convalescents return to work before the infective stage of the trouble has passed.

To my knowledge, nothing is done to destroy clothing which has been used by small-pox cases. Such clothing may or may not be washed, but if washed is probably so cleansed in the canal water, which may in turn be used for domestic purposes.

Undoubtedly there is always possibility of conveyance of infection in the manner indicated. That practically such conveyance is comparatively rare is well shown in the boats running from China to Australia, where quarantine regulations are very perfect. I have intimate association with these steamers at both sides of and during the passage, and I can not recall a case of smallpox in Sydney which was directly traceable to merchandise landed from the East. All the cases which have come under my knowledge have arisen from recently infected immigrants. Doubtless, however, cases do occur as your question suggests, but not to my personal knowledge.

**Dr. Grant, of this port, has had five years' experience, and besides having charge of the American Baptist Mission Hospital, outside of the city walls, has a large practice among the natives ; therefore I will conclude these quotations by giving the whole of his letter, as his views and what he says are worthy of the deepest attention :**

(1) Smallpox was more severe during the last winter than any year within the memory of the oldest inhabitants.

(2) Ratio of cases per 1,000, 40, if you consider the population of Ningpo and suburbs, 300,000. If you consider the population 250,000, then I should say 50 per 1,000.

(3) Ratio of fatal cases, about 70 per cent.

(4) The disease seems on the increase.

(5) Not in the sense that we understand precautionary measures, but as they understand it. Yes. For instance, when smallpox breaks out in a place most of the neighbors who can, go to some other place with those of their children who have not been inoculated. When circumstances permit, the sick child is kept in a room by himself, although the nurse mingles freely with the rest of the family. \* \* \*

(6) No. The father of a child sick with smallpox makes no change in his daily occupation, whatever it may be.

(7) The clothes of those who have either died or recovered from smallpox are, in the majority of cases, taken down to the canal and simply washed in the canal water ; others again soak the clothes for awhile in water and wood ashes before washing them in the canal. This also applies to the clothes of cholera patients.

(8) Such a thing as disinfection is not known.

(9) Goods handled by persons afflicted or exposed to smallpox would be likely to carry the germs to other countries, especially if such goods were woollens, cotton batting, flannels, etc., but I do not think it likely, although there is a risk if the goods were teas, mattings, straw hats, and such like.

(10) I do not think it would be safe to allow goods to be freely exported from any infected locality, and yet I think the risk of certain articles, as before mentioned, would be so slight that a government would be justified in not prohibiting the importation of such articles. \* \* \*

It is hard to get facts in regard to smallpox, but I believe I am not far astray about the mortality, etc. The basis I have for saying so is my own experience as a doctor, visiting the coffin shops, getting the number of coffins sold for the little ones; then the fact that no little ones that had not cut almost all their teeth were put into coffins; then, again, the fact that the 5 "baby towers" or places where the dead bodies are usually placed had to be cleaned out twice during that time, whereas usually twice a year is sufficient. Again, I have also asked in a great many houses, etc.

The "baby towers" referred to by Dr. Grant are buildings about 25 feet high, built of stone and brick, with tile roof, by various charitable organizations, for the reception of babies that have died before cutting all their teeth. There is a room with a platform raised about 2 feet from the floor. On this the baby is placed, the little body being wrapped only in a piece of straw matting. They are piled on top above one another like pieces of wood until the room is full, when the bodies are put in boats and taken into the country and buried. Ordinarily these towers are cleaned twice a year, once in winter and once in summer, but, as Dr. Grant says, it was necessary to clean them twice the past winter. There are in the city 5 of these towers. \* \* \*

The people of this section do not in any case bury their dead, but place the coffin on the ground in a spot sometimes away on the hillsides, but in this city near their doors or alongside the paths. The coffins are sometimes rolled in and covered, but thousands of coffins can be seen in a short walk protected from the elements only by a straw covering.

Only a short distance away from this office are immense "charnel" houses; one is filled with corpses of those who died of cholera, the bodies being covered with lime after being placed in the coffins. The other, only a few yards from the British consulate, was erected for the reception of the bodies of those who might die suddenly, i. e., of cholera, but, owing to the great opposition of the foreigners, the use of this building is in abeyance, but at any time it is likely to be put into use.

According to the customs trade chart, there are in this consular district 11 first, 1 second, 1 third, 57 fourth, and 82 fifth class cities, and a population estimated at from 20,000,000 to 30,000,000.

I have the honor to be, sir, your obedient servant,

JOHN FOWLER,  
U. S. Consul.

CUBA.

*Yellow fever at Santiago.*

SANTIAGO DE CUBA, September 8, 1894.

SIR: I have the honor to inform you that there were 4 deaths from yellow fever in this city during the week ending last night, with an approximation of 14 new cases.

Very respectfully, your obedient servant,

JOHN T. HYATT,  
Vice and Deputy Consul.

*Sanitary report of Cienfuegos.*

CIENFUEGOS, CUBA, September 10, 1894.

SIR: I have the honor to make the following report of the sanitary condition of the city of Cienfuegos during the week ending September 8, 1894: There was only 1 death from yellow fever and 1 by smallpox during the past week.

There seems to be a marked diminution of yellow fever and smallpox.

On account of the unusual amount of rainfall and the hot weather during last August, sickness is not on the increase. The weather, although hot during the day, is cool at night. Temperature, maximum, 89°; minimum 80°. Rainfall in excess.

The following are the number of patients in the city hospitals: Civil Hospital, 150; National, 40; Dependientes, 18; St. Raphael, 20; Canarias, 14. Population of the city, 23,000 inhabitants.

The city is at present in good sanitary condition. The total number of deaths were: 2 by heart disease, 2 by entero colitis, 1 by tetanus (traumatic), 2 by dysentery, 1 by old age, and 2 by tetanus.

I am, sir, your obedient servant,

MANUEL R. MORENO, M. D.,  
Sanitary Inspector, M. H. S.

FRANCE.

*Cholera at Marseilles.*

MARSEILLES, August 18, 1894.

SIR: I have the honor to report that on the 9th instant, when at Geneva, I was informed by Mr. Richman, in my absence acting consul, that the existence of cholera at Marseilles had been officially acknowledged by the authorities. I at once cabled the Department as follows: "Cholera Marseilles. I return there immediately." Upon my arrival here I made a thorough investigation into the subject, and on the 17th deemed it wise to cable again as follows: "Twenty-one deaths cholera since August 4. Am enforcing disinfection. Wire instructions."

The 21 deaths referred to are officially acknowledged, but the investigations I have made persuade me that number of deaths from August 4 to 17 were considerably in advance of the figures given by the officials. My judgment is that the number of deaths since and including August 4 aggregate about 60.

As to the number of cases during the same period, there is absolutely no means of securing figures. No bulletins are issued; the newspapers have been careful to exclude even a reference to the subject.

It will be observed that the number of deaths per day has gradually decreased, occasioned, no doubt, by a severe mistral, which has blown for some days, and which has kept the atmosphere cool and pleasant.

I am strictly enforcing the quarantine regulations as to disinfection, and have since the various outbreaks of cholera in Russia and Turkey required disinfection of all goods, particularly wool and skins, originating in those countries, unless accompanied by a sanitary certificate as to the absence of cholera at the point of origin.

I am, sir, your obedient servant,

CLAUDE M. THOMAS,  
U. S. Consul.

To the Hon. ASSISTANT SECRETARY OF STATE.

*Death from cholericforme disease at Marseilles.*

MARSEILLES, September 1, 1894.

Weekly mortality list compiled from the daily papers; "maladies cholericformes" from memoranda slips in the prefet's office:

Total.....	234	95	16

Very respectfully,

WILL H. CHAMBERS.

*Cholera in Nantes.*

NANTES, September 4, 1894.

SIR: Referring to my dispatch of August 7, in which I had the honor to send you a translation of an article *In re cholera* in the districts of Morbihan and Finistère, and also stated that there were several cases of said disease in the city of Nantes, I desire to reiterate that it is next to impossible to send you any accurate reports of the health conditions of Brittany. \* \* \*

There is only one good health report issued in this consular district, viz, *Le Journal Médical*, and, although professedly a monthly, it appears far too late to be of any service whatever to the consular sanitary reports.

The newspapers never mention cholera or any other contagious or infectious disease unless such disease becomes epidemic.

For the above reasons I can not report to you as fully as I would desire.

But cholera is present at Nantes, and it is currently reported as being "bad" at Chantenay-lès-Nantes (an annex). How many cases there are or how many deaths have occurred it is impossible to say; but it does not seem to be of an extremely virulent nature, and the city authorities do not appear to be alarmed. There are also many cases of "fièvre muqueuse."

The sanitary condition of this city is not good. \* \* \* Moreover, the water is of poor quality. Under these conditions cholera or any other disease germs might well find a comfortable abiding place here, as witness the terrible epidemic of last year.

But in justice I must say that the authorities do their best to remedy these defects, but they do not seem to succeed, as the fault is with the people themselves.

I desire to add that there are also many cases of typhoid fever in this city at present.

I have the honor, sir, to be your most obedient servant,

REAVEL SAVAGE,  
U. S. Consul.

To the Hon. SECRETARY OF THE TREASURY.

#### GERMANY.

##### *One case of cholera in Königsberg.*

STETTIN, GERMANY, August 20, 1894.

SIR: I beg to inform you that the first case of cholera asiatica has occurred at Königsberg.

I have the honor to be, sir, your obedient servant,

F. W. KICKBUSCH,  
U. S. Consul.

To the Hon. ASSISTANT SECRETARY OF STATE.

#### HOLLAND.

##### *Cholera in Holland.*

AMSTERDAM, August 30, 1894.

SIR: Patients with indications of Asiatic cholera were removed to the hospital for infectious diseases in this city as follows: August 22, 1; August 23, 1; August 24, 1; August 25, 1; August 27, 3; August 28, 2.

The cases have all been bacteriologically proven Asiatic cholera. Since my dispatch No. 78, of August 25, 1894, 3 deaths have occurred from this disease in this city.

The record in Amsterdam to date is, total number of cases, 49; total number of deaths, 18.

The medical inspector for the province of North Holland has just reported cases of Asiatic cholera as follows, occurring between August 21 and August 29, 1894:

Haarlem, 1; Haarlemmerliede, 1; Nieuwer-Amstel, 1; Luid Scharwonde, 1; Broek oss Langendyk, 1; Wyk aan duni, 1; on board steamer Dordrecht, from Riga, 1.

I am, sir, your obedient servant,

EDWARD DOWNES,  
U. S. Consul.

To the Hon. ASSISTANT SECRETARY OF STATE.

#### NICARAGUA.

##### *Yellow fever in Nicaragua.*

NEW ORLEANS, LA., September 13, 1894.

SIR: I have the honor to inform you that the following communication was received this day from our representative at Bluefields, Nicaragua, Dr. C. W. Knight:

BLUEFIELDS, NICARAGUA, September 7, 1894.

DEAR SIR: I have been reliably informed that at Managua, also in Granada, there is quite an epidemic of yellow fever of a very malignant type, a number of foreigners having died of black vomit. This was reported to me before as "pernicious fever," but has now been pronounced to be yellow fever. There is communication with Managua frequently. This port has quite a strict quarantine, and I shall insist on the authorities here keeping it up.

C. W. KNIGHT, M. D.,  
Medical Officer Louisiana State Board of Health.

To Dr. S. R. OLLIPHANT,  
President Louisiana State Board of Health.

Synopsis of the foregoing report was telegraphed you this day.  
Very respectfully,

S. R. OLLIPHANT, M. D.,  
President State Board of Health.

SAN SALVADOR.

*Yellow fever in San Salvador—None at La Libertad.*

SAN SALVADOR, August 10, 1894.

SIR: \* \* \* On the 6th the President wrote me that "the sanitary commission, the public officers, the business men, and several private individuals at the port of La Libertad report that the health there is much improved, and no case of yellow fever has appeared for many days," and requested me to notify the consuls at Panama and Guatemala of these facts.

On the same day I received, through Mr. Triguieris, the Spanish consul, a telegram from the port surgeon and another from the Pacific Mail agent at La Libertad, certifying to the good health of the place, while Mr. Cooper confirmed their statement. An experienced physician has also assured me that the fever having disappeared for so many days, there was no danger of contagion from it.

Since then 2 southbound Pacific Mail steamers have come to La Libertad, and another one is expected there to-morrow.

But while the condition seems to be satisfactory at the port, the disease is not abating in this city. It is still sporadic, and very likely to remain so, but it is now more pronounced in its characteristics, and no longer confined to the poor. Two Americans, 1 woman and 1 young man, are down with it, and I regret to say they are both very ill. The physician attending the young man says that he has but a small chance for recovery.

I am, sir, your obedient servant,

ALEXANDER L. POLLOCK,  
U. S. Consul.

To the Hon. ASSISTANT SECRETARY OF STATE.

RUSSIA.

*Cholera at Riga.*

RIGA, August 21, 1894.

SIR: I have the honor to inform you that cholera has appeared in this city, and up to date 28 cases have occurred, of which 10 have been fatal. The local authorities are doing everything in their power to prevent a further spreading of the disease.

I have the honor to be, sir, your most obedient servant,

PETER M. SIMONI,  
U. S. Consul.

To the Hon. ASSISTANT SECRETARY OF STATE.

*Cholera in St. Petersburg.*

ST. PETERSBURG, August 27, 1894.

SIR: The official report of cholera cases in the hospitals for the week ending Saturday noon, August 25 (new style), shows a very nearly steady increase in the number of cases and of deaths from cholera in the various hospitals in this city, and the report for the twenty-four hours ending as above shows the number of new cases to be 38 and the number of deaths to be 21.

A considerable number of cases are still reported in the interior and along the frontier.

I am, sir, your obedient servant,

ANDREW D. WHITE,

*Envoy Extraordinary and Minister Plenipotentiary.*

To the Hon. SECRETARY OF STATE.

TURKEY.

*Cholera at Bassorah and Bagdad.*

BAGDAD, August 2, 1894.

SIR: I deem it my duty to report the probable existence of cholera during the past month both at Bassorah and Bagdad.

About a fortnight ago the river steamer men brought cholera rumors from Bassorah, but these rumors were generally discredited. Last week one of the British residents, the manager of the Ottoman Bank, died rather suddenly, and his death was publicly attributed to sunstroke.

Two days ago I was told that there were a number of cholera cases around the Maidan, in the Turkish quarter of Bagdad. For the truth of the report I can not vouch. But this I know, in the neighborhood, and communicating with the river is a canal or ditch filled with a green, slimy, stagnant fluid, consisting of accumulations of indescribable filth. It would be nothing strange or remarkable if comma bacilli had been hiding there since last year. I have, however, seen no case of cholera this year, though I see over 50 patients daily; none, however, from the Turkish quarter.

Some time ago there was a rumor of a very fatal disease among sheep, and that the flesh of those who died was sold in the market to the poor Arabs. I have been unable to positively verify this report.

I have the honor to be, sir, your obedient servant,

JOHN C. SUNDBERG,

*U. S. Consul.*

To the Hon. ASSISTANT SECRETARY OF STATE.

*Bovine typhus in Mesopotamia.*

BAGDAD, August 9, 1894.

SIR: Four days ago official communication was received from the sanitary inspector, Dr. Lubicz, that in consequence of an outbreak of typhus bovinus (rinderpest or cattle plague) in Mesopotamia, both on the Euphrates and the Tigris, hides, tanned leather (recently tanned), and all products from cattle would be refused sanitary certificates.

I called on Dr. Lubicz to get some information of the nature, symptoms, etc., of the disease and the extent of its spread, but found that he knew very little. It is said to be very fatal, but when the animal is

sick beyond recovery the Arabs kill it, eat the flesh, and throw what is not eaten into the river. Dead cattle are constantly floating down the stream, fouling both air and water.

There are rumors of plague in the interior, but I can verify nothing.

I have the honor to be, sir, your obedient servant,

JOHN C. SUNDBERG,  
U. S. Consul.

To the HON. ASSISTANT SECRETARY OF STATE.

*Cholera in Turkey.*

[Report 102.]

CONSTANTINOPLE, August 29, 1894.

Cholera is abating in the different provinces where it has made its appearance. There are now only a few localities where cholera deaths occur daily. There has been no cholera in the villages and cities near the coast of Marmora during the past ten days; therefore at the last sitting of the International Sanitary Commission it was proposed to abolish the quarantine of twenty-four hours, which passengers coming from the Marmora coast from Mudania to Tuzla have had to undergo at the latter place. \* \* \*

I have already stated that cholera is abating in the different provinces, but this abatement and the different sanitary cordons established between the different villages, cities, or vilayets, have not prevented cholera from appearing at Erzingan, where 6 cholera cases, of which 3 were fatal, occurred the day before yesterday (15th instant) among the soldiers of that town.

I do not know how many cholera cases or deaths have occurred among the civil inhabitants of this town.

The public health of Constantinople is good.

SPIRIDION C. ZAVITZIANO.

PROMULGATION OF FOREIGN QUARANTINE REGULATIONS.

Official notification has been received that the quarantine regulations made by the Secretary of the Treasury have been posted in the offices of the U. S. consuls at the following-named ports for ten days: Aracaju; Colombo; Esmeraldas; Hongkong; Point de Galle; Port Alegre; Saigon, and Talcahuano.

STATISTICAL REPORTS.

AUSTRALIA—*Brisbane and suburbs.*—Month of June, 1894. Estimated population, 93,657. Total deaths, 88, including enteric fever, 1; diphtheria, 5; and phthisis pulmonalis, 8.

*New South Wales, Newcastle.*—Month of July, 1894. Estimated population, 15,329. Total deaths, 27, including enteric fever, 1; and diphtheria, 2.

CANADA.—*Windsor, N. S.*—Month of August, 1894. Estimated population, 2,750. Total deaths, 5. No deaths from contagious diseases.

CUBA—*Havana.*—Under date of September 15, 1894, the U. S. sanitary inspector reports as follows:

There were 125 deaths in this city during the week ending September 13, 1894. Twenty of those deaths were caused by yellow fever, with 55 new cases, approximately, 1 was caused by enteric fever, 7 by so-called

pernicious fever, 3 by paludal fever, 5 by smallpox, 5 by entero colitis, and 6 by dysentery. Nine of the 20 deaths during the week from yellow fever occurred in the military hospital, while the remaining 11 were among private persons in different parts of the city.

*Neuvas.*—Month of August, 1894. Estimated population, 4,089. Total deaths, 3. No deaths from contagious diseases.

*FRANCE—Marseilles.*—Month of July, 1894. Estimated population, 406,919. Total deaths, 1,168, including smallpox, 6; enteric fever, 21; scarlet fever, 2; diphtheria, 25; measles, 11, and whooping cough, 2.

*GREAT BRITAIN—England and Wales.*—The deaths registered in 33 great towns of England and Wales during the week ended September 1 corresponded to an annual rate of 15.2 a thousand of the aggregate population, which is estimated at 10,458,442. The lowest rate was recorded in Derby, viz, 9.0, and the highest in Preston, viz, 22.5 a thousand.

*London.*—One thousand one hundred and ninety-eight deaths were registered during the week, including smallpox, 7; measles, 18; scarlet fever, 13; diphtheria, 33; whooping cough, 26; enteric fever, 8; cholera and choleraic diarrhea, 2; and diarrhea and dysentery, 71. The deaths from all causes corresponded to an annual rate of 14.4 a thousand. In greater London 1,562 deaths were registered, corresponding to an annual rate of 13.7 a thousand of the population. In the "outer ring" the deaths included diphtheria, 6; measles, 12, and whooping cough, 9.

*Hull.*—Four weeks ended August 25, 1894. Estimated population, 212,679. Total deaths, 218, including enteric fever, 3; measles, 4; and whooping cough, 7.

*Ireland.*—The average annual death rate represented by the deaths registered during the week ended September 1 in the 16 principal town districts of Ireland was 18.6 a thousand of the population. The lowest rate was recorded in Dundalk, viz, 4.2, and the highest in Galway, viz, 26.4 a thousand. In Dublin and suburbs 131 deaths were registered, including 4 from enteric fever, 1 from scarlet fever, and 2 from whooping cough.

*Scotland.*—The deaths registered in 8 principal towns during the week ended September 1 corresponded to an annual rate of 15.6 a thousand of the population, which is estimated at 1,447,500. The lowest mortality was recorded in Greenock, viz, 10.0, and the highest in Perth, viz, 20.7 a thousand. The aggregate number of deaths registered from all causes was 445, including measles, 6; scarlet fever, 1; diphtheria, 11; and whooping cough, 7.

*INDIA—Singapore.*—Month of June 1894. Estimated population, 56,000. Total deaths, 538, including beriberi, 17.
